SUMMARY

Frontend-focused full-stack engineer working in a multilingual SaaS environment. Experience with React and Next.js, reusable component development, and building frontend features. Created multiple open-source React NPM packages with Storybook demos and documentation and wrote multiple technical articles explaining implementation decisions. I combine frontend development skills with backend and AWS knowledge to build stable user-facing features on production environments. with Japanese and English work environment experience.

SKILLS

Framework: React, Next.js, Vue, Nuxt.js, FuelPHP, Laravel, Expo

Frontend: HTML, CSS, JavaScript, TypeScript, Redux, Zod, Shadcn, MUI, Framer Motion, Storybook

Backend: Node.js, PHP, MySQL, NoSQL, Prisma, Firebase, GraphQL

Tools & Workflow: Git, AWS, Jest, Cypress, Figma, Accessibility (ARIA), Performance Optimization

EXPERIENCE

Software Engineer (DevOps)

Jan 2025 – Present

Bizmates Inc., Tokyo, Japan

- Investigate and resolve production issues across Vue, Nuxt, and Laravel services.
- Identify root causes by analyzing frontend behavior through backend logic and SQL queries.
- Collaborate with cross-functional teams to clarify specifications and support framework upgrades.
- Improve operational workflows by building internal automation tools and optimizing database impact.

Full Stack Engineer (Frontend Focused)

Sep 2010 – Dec 2024

Self-employed / Freelance

- Developed React and Next.js applications using TypeScript, Redux Toolkit, and Tailwind CSS
- Designed and built reusable component systems with Storybook documentation
- Built responsive user interfaces, reusable components, and modernized legacy web systems.
- Integrated frontend applications with APIs and implemented data fetching and state management
- Customized and developed e-commerce frontends using Next.js with Shopify backend integration

OPEN SOURCE

- **react-next-tilt:** High-performance, customizable 3D tilt component for React.
- **react-flip-tilt / react-next-parallax:** Advanced UI components built on top of the core tilt engine.
- **swiper-mods:** Custom modifications for Swiper.js to support Z-axis parallax animations.
